

Solution for Group Feeding of Pigs in Separate Pens

Intelligently adjust the uniformity of pigs, raise good pigs and sell them at a good price

Through precise weighing systems, intelligent temperature monitoring, image recognition technology and other means, electronic identities are assigned to individual pigs, enabling intelligent zoning of meat pigs, precise prediction of their market readiness, marking of anomalies, and real-time cost accounting.

Real-time online data:

Enhance management efficiency, reduce breeding costs, the frequency of rounds, and biosecurity risks.

Pig disease management:

Early prediction of diseased pigs, automatic push of APP tasks

Value

Reduce FCR by **0.1 - 0.2**

Reduce mortality and culling rate of fattening pigs by **30%**

Keep the weight difference of pigs within **5kg** and each pig can be sold for an additional **\$7**

Labor efficiency: **3,000 - 4,000** heads per person
